

IM-500 — Predictive Maintenance Addendum (Rev 3.1)

Supplement adding a newly monitored sensor and its spare part. Use for the before/after RAG demo.

New monitored parameter

Parameter	Sensor	Normal	Warning	Critical	Failure signature	Predicted lead t
Servo position error	Encoder feedback (counts)	0 - 50	50 - 120	> 120	Rising = encoder EN-77 degradation	6 days

New spare part

Part No.	Description	In stock	Min stock	Lead time	Supplier	Status
EN-77	Servo encoder	0	1	21 days	OEM-Korea	OUT - long lead, expedite

Note

Encoder EN-77 has a 21-day lead time but the predicted failure is ~6 days away, so any request for EN-77 must be marked URGENT and escalated to the Bay-3 lead immediately.
